### **Abstract**

Recently, a number of top institutes and universities in Indonesia, both state and private, offer international classes - class with English as the language of instruction - to local and overseas students in order to upgrade their status as an Indonesian university with international standard. This article aims to share the experience of the writers in designing the English language training program as parts of the recruitment of lecturers to teach the international class or Z class as it is called at University of Surabaya. Adopting the ADDIE model of instructional design, the process started from analyzing and identifying the problems of the lecturers in speaking. Then, it was followed with the selection, design and development of materials. The output was a syllabus/course oultine. In the phase of implementation, there was a teaching simulation with strict evaluation by the trainers on the trainees' performance. The last phase was a report to the university about lecturers who had fulfilled the minimum standard of English proficiency to teach the Z class (international class). Those who had not met the standard, had to attend a continuing training program at Ubaya Language Center.

Keywords international class; course design; English training program; ADDIE model

### A. Introduction

In the last five years, there is a trend in the higher education in Indonesia-colleges, institutes, universities- to offer international classes in their promotions. Slogans like "We offer international classes of business to students engineering" or "We offer bilingual classes" are commonly found in social media. What is international class? Based on the pomotional media from those offering this program, an international class is characterized by three things. First, the class **English** uses as the language of instructions. Second, the class can be taken by local students (Indonesian citizens) and overseas students whose English is up to the standard and this can be seen from the English proficiency test score. Third, the tuition fee is relatively more expensive than the regular lecturers consist classes.The Indonesians and foreigners whose English proficiency is up to the standard as well, at least intermediate or B2 (in the range A1, A2, B1, B2, C1,C2- CEFR) level. So far, the information on the success of the programs, recuitment of lecturers, and problems faced by the institutions in running the international class is still very limited.

To fill in the gap, this article deals with the writer's experience in English designing the training program for lecturers of non English, University of Surabaya (UBAYA) who want to teach their subjects in English. The university realizes that it is not enough to improve the student's competence in English, especially in speaking and writing, through the English subject offered in the first semster. Mastering the English speaking skill is a long process. Therefore, the English language for students should be program designed in several phases during their study. First, in the orientation program in the first semester, students required to take TOEFL ogranized by UBAYA Language Center (ULC) to identify their English proficiency level. Then, in the first semester, students of all faculities and departments, are

required take the subject "Communicative English" with two credits (once/week for 100 minutes, 14 meetings). The learning outcome of this subject is to make the students and write. It focuses speak productive skills. The evaluation in mid-term and final term test spoken, not written. The next program for students to use their speaking and writing skills is a class called "Z class". This is a subject in any majors, engineering, chemistry, etc. using **English** as the language of instruciton. It is like an international class. The purpose of offering this subject in English is to expose the students to the real experience of using their English language skills, especially speaking and writing in their major: technology, pharmacy, business, law, psychology, medicine. It is hoped that by the end of their study, students have mastered the speaking proficiency and they are ready to compete in the global job market.

The problem with Z class (the class delivered in English) is that not all lecturers are competent enough to teach the subject in English although

they master the content. Some lecturers are ready since they got their master's and doctorate degree from overseas universities in English countries. Their speaking in using the English competence language to transfer their knowledge is already up to the standard; there is no doubt about it. On the other hand, lecturers, in spite of their expertise in their subject, do not have sufficient competence to teach their subject in English. Therefore, the university, in this case, ULC, designs an English training program to make them ready to teach their subject in English.

The discussion in this article covers four main parts. The first one is the underlying theory in connection with the instruction design or course design. The second is the selection typical language functions phrases, sentence patters- which are usually used in the classroom communication and interaction. The third one deals with developing and implementing the materials class. The last part presents the steps in selecting the lecturers for this

program and evaluation. These are presented in details below.

### BASIC CONCEPT OF COURSE DESIGN

In the context of language teaching, both Fraida Dubin and Alite Ohlstain (1986) and Brian Tomlinson (1998) define course design as the process of developing programs and materials for language teaching. Smith and Ragan (1999) use the therm 'instructional design' in stead of course design to refer to the systematic and reflective process of translating the principles of learning and instruction into plans for instructional materials, activities, information resources. and evaluation. The main questions to consider are for whom the instruction is designed, what goals drive the instruction, and which objectives students will follow to ensure they do what you want them to do.

There are many different models used in the instructional design to develop the course materials but the one widely used is ADDIE (Analyze, Design, Develop, Implement, Evaluate) although many

others exist and are used. This model was first designed by Florida State University in 1980 and developed by Reiser and Mollenda in the 1990s (www.niu.edu/facdev. Downloaded on September 20, 2021). The first step in this model is to analyze and understand all aspects of instructional problem. In other words, why are we teaching what we teach and who are our learners. context of English for the lecturers, it is not only the needs of the lecturers but also the needs of the university policy makers. In the design phase, we have to consider all components of instruction from beginning to the end. During the design phase, we write learning objectives for events and tasks required, determine which methods, materials and media will be incorporated in the course. The design can be in the format of a syllabus. Development (or production) is the step where we actually create the things used in teaching: the lecture material, the handouts and assessment rubrics that instructors and students will use. We have to check whether we can get by using existing product or to begin from nothing. Implement is where the actual instruction takes place. This is where instructor teaches the students/trainees using the textbook. *Evaluation* happens at two levels: formative which tells us what is occurring and summative which tells us what has occurred. With data in hand, instructors need to ask how he /she can modify the instruction to improve its next training. This model can be clearly seen in the diagram below. (https://www.instructionaldesign.org/model

//www.instructionaldesign.org/model s/addie, retrieved on October 14, 2021)

# SELECTING THE TYPICAL EXPRESSIONS AND SENTENCE PATTERNS USED IN TEACHING

In this step, we selected the materials which were used in the training. We tried to dopt the model of design called ADDIE (Analyze, Design, Develop,

Implement, Evaluate) **recommended by** by Florida State University in 1980 and developed by Reiser dan Mollenda in the 1990s. Following this model, the first thing to be done was to analyze the trainee's problems in using the language to teach through a tight interview and teaching simulation. Based on the analysis in this step, we identified a number of typical patterns, usually

used in teaching which have not been mastered yet and design them in chronological order. For example, what should the lecturer do with a concept they want to teach? First, they have defined and classified it. The rest will follow. The design of these typical patterns is referred as language functions as seen in the table below.

Typical language function and sentence patterns used in teaching

no	Language	Patterns	Examples
	function

# DEVELOPING AND IMPLEMENTING THE MATERIALS

From step one and step two ( Analyze, Design) mentioned earlier, we developed and specified the tasks for each topic. For example, to master how to define and classify concepts, the lecturer of computer science was asked to talk about a broad topic, such as "computer". First, she/he would define it, then classify it. Then the next task would deal with comparison and contrast.

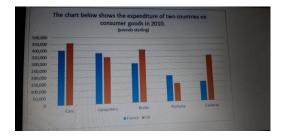

For example, she/he was asked to compare two products of computer with different brand to identify the similarities and differences. A lecturer of mechanical engeering would be asked to compare two products of motorcycle as seen in the table below.

HONDA BEAT VS YAMAHA MIO

Points	Hon	Yama	Clues
of	da	h Mio	
compari	Beat		
son			
Price	Rp	Rp 12	cheap,
	12 m	m	expensi
			ve,
			Seen
			from
Origin	Japa	Japan	from,
	n		made
Fuel	40	30	Econo
consum	km/l	km/lit	mical,
ption	iter	er	consum
			ptive
Max	100	120	Fast,
speed	km/	km/h	slow
	h		

Market	5000	3000	High,
demand	units	units/	low,
	/mot	moth	favorite
	h		

For the lecturers of business and economics, one of the tasks was to describe the graph/chart as seen below.

To help lecturers organize their description systematically and speak fluenctly, we facilitated them with typical expressions and steps of description as seen below.

Typical expressions: The chart gives an illustration about ...

The vertical axix represents .... The horizontal axis represents ...

The expense of UK on cars ---- more / less than ...

France spent more money on.... than UK

Steps in describing the chart:

- 1. The topic
- Vertical axis horizontal axis bars (red and blue)
- 3. Details ( starts from cars, then..)
- 4. Conclusion ( Which country spent more ... on what ..)

Below is another topic developed to master the sills of describing graph. Again, it is important to provide the clues (vocab) and steps of presentation

The sales of mobile phone in East Java 2017-2019( in units)

		201	201	total
Prod	201	8	9	
uct	7			
Sams	340.	560.	900.	1.800
ung	000	000	000	.000
Vivo	320.	260.	420.	900.0
	000	000	000	00
Opp	200.	120.	80.0	400.0

Trends: upward: went up, increased, rose, reached, rocketed (all verbs: past tense)

Downward: fell, dropped,

declined, decreased

Stood at, remained stable, was up and down, fluctuated

How: slight/slightly, steady/steadily, sharp/sharply (adj and adv.)

Collocations: The sale of
Samsung increased sharply by 50 %
There was a
sharp increase in the sale of Samsung
by 50 %

## STEPS IN PRESENTION/DESCRIPTION

- 1. Topic: I would like to describe ----
- 2. Products, year
- 3. Trend: up/down (simple past)
- 4. Details: by year, by product, simple past
- 5. Conclusion: what product dominated the market?
- 6. Prediction: what will happen in the next three years?

SELECTION AND EVALUATION OF THE LECTURERS FOR THE Z CLASS

The process of recruiting the lecturers for Z class ( class

delivered in English) was done through the steps below. First, the dean of each faculty selected and recommended names of lecturers interrested in the Z class to the Vice Rector I of the university completed with some documents related to English language proficiency. In the next step, Vice Rector I in charge of academic affairs sent those names to Ubaya Language Center to organize diagnostic test ( written spoken) in order to identify the weak points and strong points of each lecturer in expressing himself/herself as a lecturer. Then, based on the result of diagnostic test, the ULC team designed and developed training materials. After that, training began, focusing on the use of English as the language of instruction in class. including language functions and typical patterns used in class. The last step was teaching simulation, in which a class of lecturers was organized and each lecturer should teach a subject of his/her major for 20 minutes. During this process, their performance was evaluated scored by ULC team. Based on the

result of evaluation, the ULC team recommended to the Vice Rector I who had fulfilled the minimum standard to teach the Z class and who had not. Those who were not recommended would have to attend a remedial program designed by ULC

### **CONCLUSION**

Learning and mastering a foreign language is a long process. It requires consistent and persistent There is a trend at the universities in Indonesia to offer international class to students ( classes in which English is used as the language of instruction). The success of this program depends not only on the students but also on the lecturers teaching the subjects. Students should be prepared for that class by training them on acadmeic skills: note-taking, outlining and summarizing, essay writing and presentation skills. The lecturers should be prepared as parts of the staff development, including sending them to pursue their master's doctorate degree abroad in an English speaking country. If both the students and the leacturers have sufficient competence in English, they will not blame each other for the failure. In brief, this program should be planned and designed systematically. If we fail to plan, we plan to fail (Winston Churchill, Former Prime Minister of UK)
